

# Minoxidil & Hair Transplant

Oral Minoxidil, due to the lack of local irritation on the scalp, can be a more suitable option than topical minoxidil after hair transplantation.

The majority of individuals who undergo hair transplants experience a period of shock loss, where hair in the recipient area and sometimes surrounding areas may fall out.

# 3 Key Benefits of Minoxidil after Hair Transplantation:

- Reduction of post-operative hair loss or “Shock loss”
- Acceleration of post-operative hair regrowth
- Control of future hair loss Especially in people who are prone to genetic hair loss.<sup>(7)</sup>
